

**BPI Review Form 070520**

Book Name:	<a href="#">Medical Research and Its Applications</a>
Manuscript Number:	<b>Ms_BPR_1448</b>
Title of the Manuscript:	<b>Physical therapy for Attention Deficit Hyperactivity Disorder (ADHD) in children</b>
Type of the Article	<b>Book chapter</b>

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (If agreed with the reviewer, correct the manuscript and highlight that part in the manuscript. Authors must write his/her feedback here)
Is the manuscript important for the scientific community? Please write a few sentences explaining your answer	Physical therapy with children with ADHD is not as commonly given attention in the literature. However, due to the complexity of the diagnosis and its symptomology, there has been recent interest on PT interventions among this population. This manuscript can help bridge such dearth in the literature. Albeit a narrative review in nature, it has implications in contributing to synthesized evidence on the topic.	
Is the title of the article suitable? Do you have any alternative Title in your mind?	Overall, the title is quite generalized to capture the content and aims of the study.  To enhance reporting, the authors may optionally consider contextualizing the title by providing additional information on the contexts and specific aspects of PT interventions that were summarized and reported herein.	
Is the abstract of the article comprehensive? If your answer is No, please provide suggestions	The abstract seems succinct enough to provide context to the content of the manuscript. To enhance reporting, I suggest providing 1-2 sentences that justifies the link between ADHD and physical therapy within the background subsection.	
Do you think the English quality of the article is suitable for scholarly communications? If your answer is No, please provide suggestions	This manuscript will benefit from professional proofreading. Sometimes, the writing seems off with disregard to conventional syntax and semantics of the English language.	
Please provide your comments regarding the appropriateness of different sections of the manuscript.	<ul style="list-style-type: none"> <li>In the introduction, the rationale behind why PT may benefit ADHD children should be highlighted. Much of the available written background dealt mostly with medications. The recommendation on why and how PT can address the symptomology of ADHD may underpin the rationale behind the reported manuscript.</li> <li>The specific common therapies summarized may be enhanced by the authors' specific recommendations based on the reviewed literature. Care should be taken on how these recommendations are given (i.e., conceptual definition of terminology, needed space and materials, intensity, etc.).</li> </ul>	
Do you think that the references in the manuscript are proper, recent and sufficient? If you have any suggestions, please write here.	The references seem sufficient. I have no further suggestions.
