

[Review Form 2](#)

Book Name:	Disease and Health Research - New Insights
Manuscript Number:	Ms_BPR_2196
Title of the Manuscript:	Activation of mucosal immunity and novel prophylactic and therapeutic strategy in combating COVID-19
Type of the Article	Book chapter

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	Due to the fact that coronavirus infection is severe, any preventive measures are relevant. The mucosal vaccine should provide protection against the penetration of coronavirus into the body in order to prevent the development of the infection. This manuscript is dedicated to this.	
Is the title of the article suitable? (If not please suggest an alternative title)	The title of the manuscript corresponds to the problem posed and fully reflects its content.	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The manuscript abstract fully reflects the current aspects of its content and does not require correction.	
Are subsections and structure of the manuscript appropriate?	The sections and structure of the manuscript are logically correct and correspond to modern ideas about the mechanisms of development of coronavirus infection and its vulnerabilities.	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	The manuscript reflects modern ideas and knowledge regarding the development and consequences of coronavirus infection. Vulnerabilities and points of application of the antiviral action of the immune system of the mucous membranes of the upper respiratory tract are identified, including the use of natural herbal preparations. This manuscript is scientifically robust and technically sound.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The references are sufficient and recent.

Minor REVISION comments		
Is the language/English quality of the article suitable for scholarly communications?	The English is quality and suitable for scholarly communications.	
Optional/General comments	Despite the fact that coronaviruses are becoming less dangerous to humans due to evolution and natural factors compared to the epidemics of 2002-2003, 2012 (MERS) and 2019, preventive measures, especially vaccination, remain relevant to this day. This work is the first step that will allow us to further use the entire spectrum of natural protective mechanisms to prevent the development of not only coronavirus pathology, but also against other respiratory viral infections.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
