

[Review Form2](#)

Book Name:	Disease and Health Research: New Insights
Manuscript Number:	Ms_BPR_2475
Title of the Manuscript:	Tumor Associated Macrophages: A Review with Institutional Study
Type of the Article	Book chapter

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	Globocan 2023 data reveals that Oral squamous cell carcinoma (OSCC) is the most common cancer amongst men 22.6% and second most common amongst women 12.8%, with mortality rank of 75.1% in Asia. OSCC has a complex etiology in the transformation of a premalignant process into an invasive carcinoma is largely influenced by local irritants. Local recurrence is a major factor contributing to treatment failure for OSCC. This manuscript concentrated on only 1 parameter to evaluate the prognosis whereas other pathological parameters could have also been considered.	
Is the title of the article suitable? (If not please suggest an alternative title)	Title can be modified for better understanding the objective of the study.	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	yes	
Are subsections and structure of the manuscript appropriate?	No	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	Interesting study. OSCC has a complex etiology in the transformation of a premalignant process into an invasive carcinoma is largely influenced by local irritants. Local recurrence is a major factor contributing to treatment failure for OSCC. The manuscript needs to concentrate on other pathological parameters for prognosis evaluation	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	No. 2 nd reference year needs to be corrected	

Review Form2

Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	No, needs correction	
Optional/General comments	In Introduction global incidence and rate of relapse of Oral Squamous cell carcinoma can be expressed in terms of percentage. Last sentence in Introduction is not very clear. Aims and objectives can be mentioned after the detailed introduction about macrophages. In Methodology institution name should not be revealed Scoring criteria is there any reference or standardization Any particular reason for considering T1 and T2 cases and the results included stage 3 cases also In Discussion first paragraph sentences are same as introduction. Elaborate other techniques for detection of macrophages other than IHC and supporting articles Any differences in the results when different techniques are used to detect macrophages needs to be discussed. The authors themselves have mentioned the limitation of using only H and E. They could have combined different techniques and detected macrophages.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
