

Review Form2

Book Name:	Innovations in Biological Science
Manuscript Number:	Ms_BPR_2459
Title of the Manuscript:	Molecular Pathways of and the Future Therapeutic Implications for Atopic Dermatitis: AnOverview
Type of the Article	Book chapter

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimumof 3-4 sentences may be required for this part.	Atopic Dermatitis has a high incidence rate among infants, children, and adults. The severe form of the disease is challenging to manage and exacerbates frequently. It brings psychological distress to the patient and parents. The current treatment modalities are not targeted towards the molecular pathophysiology of the disease. New immunomodulatory treatment options will improve disease control and the patient's quality of life.	
Is the title of the article suitable? (If not please suggest an alternative title)	Targetting molecular pathwaysfor atopic dermatitis therapy: An overview	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	1. A short introduction to the clinical aspects and the psychological burden of the disease 2. Mention the current treatment options and why they have failed	
Are subsections and structure of the manuscript appropriate?	Biological Therapeutics in Development should be a Subsection.	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimumof 3-4 sentences may be required for this part.	1. The paper is scientifically sound on the disease's pathophysiology and mechanism. 2. The diagram explains the immunomodulation upon allergic reaction 3. The data and facts are up-to-date on the latest developments regarding molecular therapeutics	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	All references are relevant.	

Review Form2

Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	The English are simple and easy to read, however, it could be improved	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
